

EEB 6600.5 PWX

Features:

Energy efficiency class A

In EU countries a common energy labelling system provides a guide to how efficiently built-in electric ovens and cookers operate. Class A represents the most efficient and economical use of electricity.

Multitherm plus

The hot air convection system with ring heating element enables cooking on up to four levels without transferring the flavour and aroma between different foods.

Ökotherm

The oven catalyser converts dirty, greasy air from the oven into clean air and water. This means a cleaner oven and at the same time clean, odourless air is discharged into the kitchen.

ÖkoEmail plus

With its extremely smooth, non-porous surface, this non-stick enamel finish makes grease and food residue easy to wipe off.

Roasting thermometer

The roasting thermometer makes sure every roast is cooked to perfection. It reliably indicates the degree the roast has been cooked, and turns off the oven when the desired results have been achieved.

13 baking and roasting programmes, 11 heating programmes

Precise cooking temperatures and times are specified by the programmes for perfect baking and roasting results. Individual heating programmes are also available.

Dual clear text and graphical touch display for programme and function selection

The clear text display guides you through the programme functions. A second digital display guides you to the desired cooking result step-by-step.

Fully electronic system including programmable clock functions (duration, start or end time, minute minder)

The user-friendly electronic oven controls with symbol display provide user guidance for fully-automatic baking and cooking.

Automatic weight adjustment

Automatic weight adjustment adapts the cooking times and temperatures of cooking and baking programmes to the selected weight being cooked. This guarantees optimum cooking results.

Rapid Heating

The oven is pre-heated to the set temperature extremely quickly.

Switch-off memory

If the oven is accidentally switched off while cooking, the electronic control system saves the current programme in the memory and can resume cooking at the point where the programme was interrupted, if desired.

Full glass inner door on stainless steel frame, removable

The inner door forms a smooth surface without crevices, recesses, or screws. This makes it extremely easy to clean.

Triple door glazing

Triple door glazing combined with the heat-reflecting inner pane provides optimum insulation. As a result, the front of the oven stays cool – even at high cooking temperatures.

Full glass front

Drop-down large-area grill

The large drop-down grill makes it easier to clean the ceiling of the oven when required.

Halogen oven lighting on both sides; can be switched off

Two extra-bright halogen lights are mounted on the left and right at different heights inside the oven, so that anything you cook is illuminated from all sides.

Premium telescopic glide-out shelves can be fitted as an optional extra.

Highly versatile glide-out system; every glide-out can be removed individually and re-positioned on any of up to 7 different levels.

Door contact switch

The door contact switch is an energy-saving safety feature that deactivates all heating elements and hot air fan if the oven door is opened during operation.

Child lock

Tangential cooling fan

The tangential cooling fan ensures that adjacent cabinets receive as little heat as possible thereby avoiding damage to the cabinet fronts.

Choice of handles

Various handle designs allow you to perfectly match your built-in appliance to the style of your kitchen.

Electrical connection: 3.65 kW

Appliance dimensions : W x H x D approx. 595 x 595 x 562 mm (incl. 22 mm front)

Niche dimensions : W x H x D approx. 560 x 590 x 550 mm
